

# Religious Challenges From Space

Tuesday Evening Learning with Rabbi Shlomo Levin

## Observing Mitzvot in Space

Tuesday, May 4th 7PM

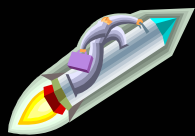

On earth we recite prayers three times per day and observe the Sabbath once a week. What about in space? How would these time-related commandments be observed by an astronaut? What about someone living at the North or South pole?

## The Theological Implications of extraterrestrial Life

Tuesday, May 11th 7PM

Imagine the excitement if intelligent life was discovered in space. What if an alien became so impressed with Judaism it wanted to convert? Would we expect aliens to observe the Noahide commandments? In this class we will examine the theological implications of the possibility of intelligent life on other planets, and through so doing learn a little more about our current religious beliefs here on earth.
